

Cabling Services

We install all the cabling, connectors and accessories at a central location for your data network and phone equipment, then use vertical and horizontal cable runs from that location to reach individual desktops. We use a variety of cable types, including:

- Category 3 through Category 6e
- CATV
- Multimode / Single-mode Fiber

Our premises wiring systems provide consistently high-bandwidth and error-free performance, giving you the best value for your money.

Backbone

Vertical cable runs extend your voice and data network to other floors in your building or interconnect offices in multiple buildings. We pay attention to cable routing and arranging for proper support of the cable weight.

- Multimode/Single-mode Fiber
- Copper backbone
- Mechanical / Fusion splicing
- OTDR and Power Meter Documentation and Much More!

- Retail Services, POS
- Federal & Local Government Services
- Printer, Desk Top, Copier Machines and More.
- Partners: Barrister Global Services
- Spencer Technologies
- Service Live, Service Agreements
- Legal, Education IT Services

CUSTOM SOLUTIONS

Network Infrastructure is a transport mechanism for all of the data on your network. With a constant increasing amount of data being produced and accessed on a regular basis, the need for solid dependable network infrastructure is more important than ever. Left unchecked, streaming media and recreational web surfing can clog corporate networks with unnecessary traffic and starve mission-critical applications of the bandwidth needed to run effectively.

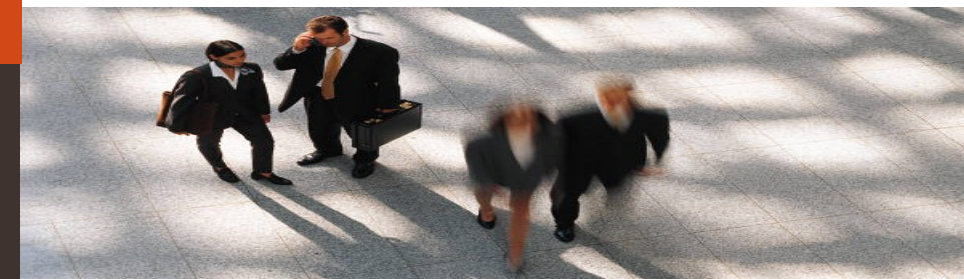

Additionally, both service providers and corporations alike need to be able to protect themselves from flash-traffic situations and to manage their external bandwidth access costs. To protect bandwidth and scale networks in size requires an infrastructure design that employs policy-based controls to manage content, users, and protocols.

Our Consultants will work with you to determine the health and stability of your current network infrastructure and how to prepare it to handle the challenges and increasing requirements of the future.

BUSINESS SOLUTIONS

Network Management solutions provide a comprehensive approach focused on providing manageable, standards-based architecture to enable the proactive, streamlined management of your environment. Benefits include established solutions from technology leaders such as Microsoft, Symantec, HP, Dell, VMware and others.

Our network consultants can work with you to:

- Execute IT systems tasks consistently across your enterprise, while still supporting configuration and compliance requirements
- Support a "standard" environment, even with disparate platforms and a multitude of tools and manual operations
- Anticipate, predict and even prevent business disruption
- Consolidate and centralize support resources, while meeting support SLA's at remote locations
- Automate the server provisioning process in your environment
- Avoid or eliminate your recurring IT issues

Our Company offers specific services to address your network management challenges from planning and design, line of business management that includes messaging, database, security & compliance and availability management, critical remote management and data center availability management.

We can offer end-to-end solutions with a single point of contact for hardware, software, services and on-going support. In a time when many providers aspire to do everything, we focus on Network Management service excellence. We will work with you to gain an understanding of your business objectives and IT strategy, then design plans that are flexible enough to adapt to current environments and structured to scale to future requirements.
